## movie night: TOXIC HOT SEAT an HBO Documentary

### ABOUT TOXIC HOT SEAT

Chemical flame retardants are everywhere. Our furniture. Our homes. Our bodies. But do they work as promised? And are they making us sick?

The three chemical companies producing flame retardants would prefer that we not ask these questions, and they've spent millions of dollars on lobbyists, publicists and influencers to ensure that we don't. It might remind you of the Big Tobacco cover-up. Which makes sense, since Big Tobacco has had a hand in this, too.

Through the personal stories of a cancer-surviving firefighter, a renowned chemist whose work helped remove fire retardants from kid's pajamas in the 1970s, and a brave and determined young Maine legislator and mom, TOXIC HOT SEAT reveals the courage of brave citizens willing to fight for the truth against a shadowy nexus of money and politics.

Jan 3 (Fri), 2014 • 4 - 6 pm • UCD Campus • Davis, CA  
Plant and Environmental Sciences Hall, rm 3001

**New location!**

### About the Event

This **FREE** public event is intended to familiarize a general audience with science that is meaningful to our daily lives. Following the movie, there will be ample time for open floor discussions.
